Objectives

Computer Science Engineering student with hands-on experience building full-stack and product-oriented applications using React.js, Node.js, Express.js, MongoDB, REST APIs, and Docker. Experienced in developing backend services, real-time applications, authentication workflows, browser automation, and AI/LLM integrations through academic projects, internships, and hackathons.

Technical Skills

Languages: Java, JavaScript
Frontend: React.js, HTML5, CSS3, Tailwind CSS, Responsive Design
Backend: Node.js, Express.js, REST APIs, WebSockets, Authentication (Custom Auth, Google OAuth)
Databases and Storage: MongoDB, MySQL, CRUD Operations, Data Modelling
AI & Automation : Playwright, Chromium, Browser Automation, Web Automation, Design,LLM integration
Tools and Technologies: Git, GitHub, Docker, Vercel, Replit,Linux,Ubuntu (deployment)
Core Concepts: DSA, OOP, DBMS, Computer Networks, API Integration, Problem Solving, Debugging

Internships

Software Development Intern — NTRO, Delhi **Feb 2026- May 2026**

- Developed and maintained an internal organization-wide web application using the **MERN stack**, with features actively used in day-to-day organizational workflows.
- Worked on **application security and maintenance**, identifying and addressing application-level security concerns while ensuring reliable and secure operation.
- Contributed to **application deployment and maintenance**, supporting updates, troubleshooting, and smooth availability of the application in the organizational environment.
- Worked with **Graylog** for application log monitoring and analysis to assist in identifying errors, application issues.
- Collaborated under the guidance of **senior officials and experienced technical professionals**, gaining hands-on exposure to secure software development, application maintenance, deployment, and production-oriented development practices.

ISRO — SDE Internship Selection
Selected for 4-Month Software Development Engineering Internship

Achievements /Hackathons

SIH(Smart India Hackthon) – Finalist 2025, IIT Jammu- 181221

Education

B.Tech, ComputerScience and Engineering
Oriental Institute of Science and technology (OIST), Bhopal (2023–2027) CGPA:8.0
ClassXII (CBSE)—Holy Faith H.S. School, Harda (2023) 70%
ClassX (CBSE)—Holy Faith H.S. School ,Harda (2021) 89%

Academic Projects

Cloud Browser with Persistent Profile Cloning
Tech: Node.js, Express.js, Docker, Chromium/KasmWeb, AES-256-GCM, WebSocket, REST API

- Developed a cloud-based browser platform that intelligently clones a user's Chrome profile.
- Implemented **Selective Profile Cloning** to transfer only essential browser data to reduce the storage.
- Integrated **Docker containers** to restore authenticated sessions, browser preferences, and runtime data within seconds.
- Secured sensitive browser data using **AES-256-GCM encryption**, **PBKDF2 key derivation** to ensure end-to-end privacy.
- Designed a **smart system** that uploads only modified profile data, significantly improving synchronization speed and reducing storage costs.
- Reduced browser startup time from **15–40 minutes to nearly 15 seconds**, enabling a portable, persistent, and cross-platform cloud browsing experience.

AI-Powered Attendance Automation System (Playwright and WhatsApp Bot) |Link
Tech:Node.js,MongoDB,Playwright,LLM,WebSockets,browserless.io,MERN,Selenium,Puppeteer

- Developed an AI-based automation system for attendance tracking and notification delivery
- Built a WhatsApp –integrated bot enabling real-time user interaction and updates
- Automated data extraction work flows using browser automation tools (Playwright and Puppeteer)
- Integrated LLM –based chat bot for handling conversational queries
- Reduced manual attendance tracking effort by **70%+**

Aadhaar Identity Verification System |Link
Tech:MERN ,AES Encryption, QR Code System, Data Processing

- Built system to detect inconsistencies in hierarchical identity data
- Implemented validation logic for fraud detection and duplicate prevention
- Built multi –stage verification workflows across hospitals and government entities
- When scanned using a specialized custom created scanner ,the QR displays the entire **family tree**.
